

Update & Run Spybot

You should update Spybot before you run it.
(Updating it will make sure it is looking for recently discovered problems.)

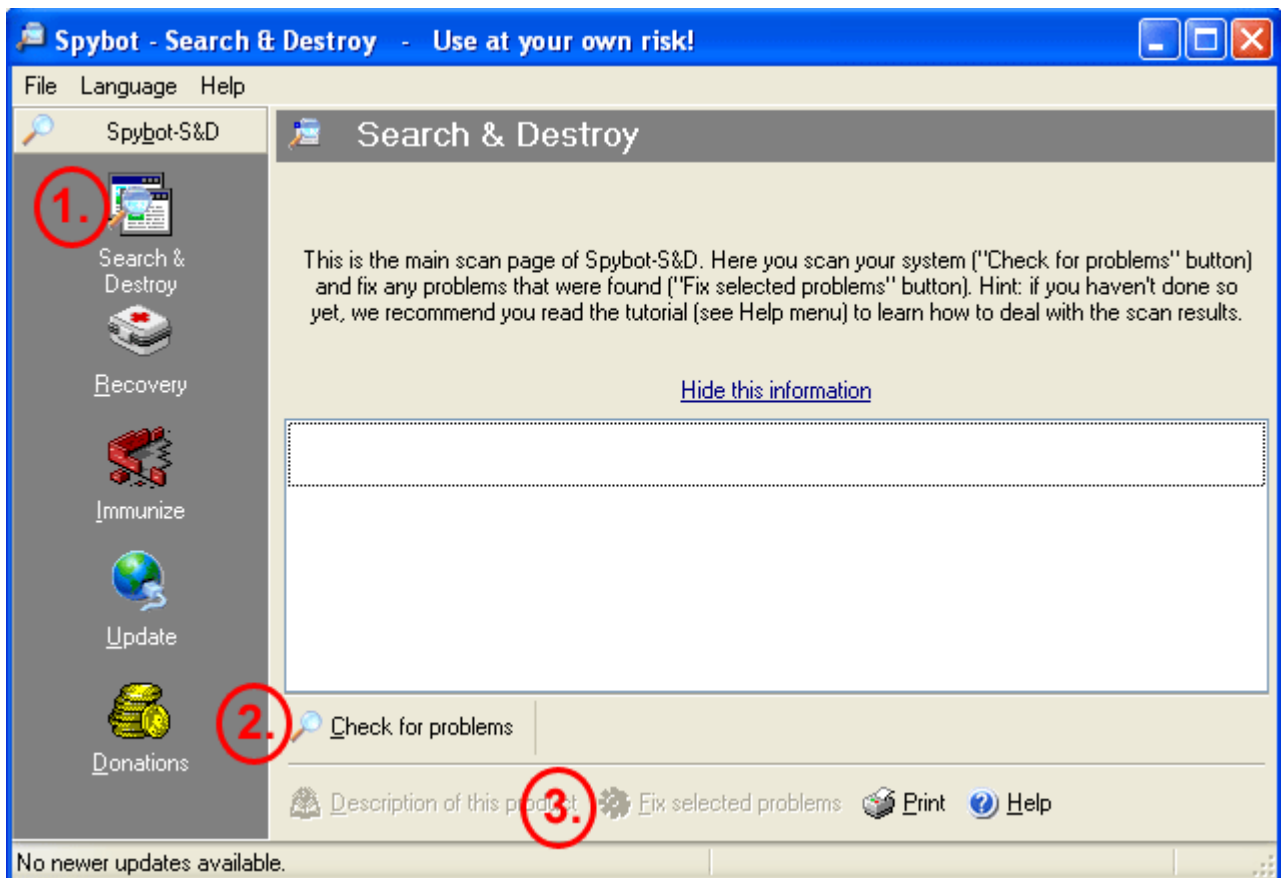

Double click the Spybot Icon on your desktop.
(or go to Start > Programs > SpyBot - Search & Destroy, and click on 'SpyBot - easy mode')

Update Spybot

1. Click the "Search for updates" button. Spybot will now search for updates, this may take a few minutes.
2. When it is done there will be things listed in the lower white box: **make sure all selections are checked.**
(If a window opens that says, "No newer updates available," then click 'Ok,' and see below for how to [Run Spybot.](#))
3. Click the "Download updates" button.
4. This may take up to 5 minutes to download. When it is finished Spybot will restart.
5. When Spybot restarts it will ask you a couple questions, click ok to those.
6. It will bring you to the main screen of spybot. (see below for next steps)

Run Spybot (to check for & destroy problems)

(#'s below correspond to #'s in figure above)

1. Click on the "Search and Destroy" button.
2. Click on the "Check for problems" button. This will start the search, it will take anywhere from 15 minutes to an hour.
3. Once it is done, the "Fix Selected problems" button will highlight. Click that. It will delete all the problems it found
4. You will be back on the main screen, you may close spybot.
